What is Stainless Steel?

Stainless steel is not a precious metal such as platinum, gold, etc., but it is surely one of the most sophisticated construction materials used today. Stainless steel is a high grade alloyed steel having an exceptional resistance to corroding substances.

Adding small quantities of chrome to the steel improves its resistance to the

1930: The Chrysler Building's top seven arches are stainless steel clad. This New York City landmark is one of the world's most identifiable skyscrapers

development of rust. The chrome reacts with oxygen and a chrome-enriched metal-oxide layer (passivating layer) is formed on the surface, protecting the metal from corrosive materials.

Stainless steel will not chip, fade or crack. When scratched, the natural protective layer will reform, making it a hygienic choice. Plus, Stainless Steel is 100% recyclable and lasts a lifetime!

Featured Items.....

Greensboro Pipe Company stocks a large selection of Stainless Steel pipe, valves and fittings. We stock both import and domestic stainless fittings.

We carry Stainless in both 304 and 316 grades-schedules 10 and 40. Our fittings are available in Butt weld and Threaded. Our Butt weld stock fittings are size 4" and below and our threaded

Stainless steel pipe, valves and fittings

fittings are primarily 2" and below. However, we can order any items that you may need, with deliver times between 2 and 10 days (depending on the item) if we don't

have them in stock.

Greensboro Pipe Company's stock of Stainless steel flanges are raised face and flat face, threaded, slip on and blind flanges. Plus, we also carry nipples, stub ends and ball valves to complete your applications.

If you have a special order or if you need stock items, give us a call today. We are here for all of your Stainless Steel needs!

We're Connected.....

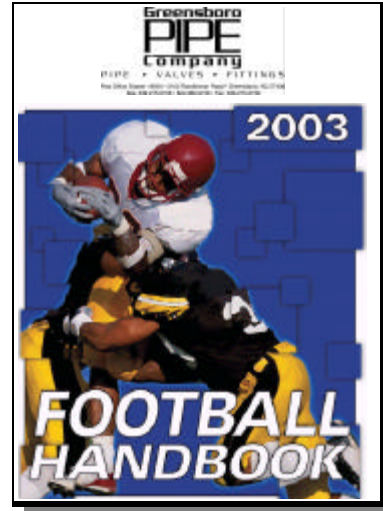

"The Plumbing-Heating-Cooling Contractors-National Association is dedicated to the promotion, advancement, education and training of the industry for the protection of the environment, and the health, safety and comfort of society."

PHCC has been advocate for plumbing, heating and cooling contractors since 1883. As the oldest trade organization in the construction industry, approximately 3,700 members nationwide put their faith in the association's efforts to lobby local, state and federal government, provide forums for networking and educational programs, and to deliver the highest quality of products and services. See our Ad on page 21 of the 2003/2004 Membership Directory.

Focused on local problem such as certification of contractors and on state wide problems concerning such issues as water quality and availability. The CIA has also addressed backflow prevention and the plumbing rules that apply to different communities in North and South Carolina.

Pick Up a Schedule!

Next time you're come into Greensboro Pipe Company, don't forget to pick up a copy of the 2003 Football Schedule! You'll find listings for College games as well as Pro Predictions for the AFC and NFC and schedules. There is even a section for Fantasy Football Player Ratings. If you would like for us to mail you a copy, just call us and let us know.

Proper care of your Stainless Steel Pipe will keep it "healthy" for years to come.

Did You Know???

Stainless Steel Pipe needs extra care to keep it in good and usable shape. Here are some tips on how to store your stainless pipe and how to maintain it's corrosion resistance.

Make sure you **handle and store** your stainless steel pipe separately from your carbon steel pipe. **WHY?....**Stainless steel should never touch carbon steel pipe or the steel gate of a truck or dock. The contact could cause iron pick up and

damage the passive film on the pipe. You should store your pipe only on wood or stainless steel **cladded** racks. **Cladded** racks have strips of stainless steel running perpendicular to the pipe so that the stainless is only touching stainless.

You must also be careful about possible contaminants coming in contact with your stainless steel pipe. Anything that will prevent oxygen from reaching the chromium in stainless steel-

including dirt, oil and fingerprints- will interfere with the formation of the passive chromium oxide film. Once the film has been compromised, corrosion can take place and then your pipe is contaminated.

So, with proper care and storage, your Stainless Steel pipe will last for many years. Don't hesitate to call us if you have any questions about stainless steel pipe.
